

Question 3 :- Explain the use of grid auto row and grid auto column using code example

Answer :-

#### grid-auto-rows

Sets the size of auto-generated rows in a grid layout. For example, you can use this property to create a gallery with an unknown number of items that will automatically repeat in rows.

Example –

```
.grid-container {  
  display: grid;  
  grid-auto-rows: 150px;  
}
```

#### grid-auto-columns

Sets the size of implicit columns in a grid layout. For example, you can use this property to create a gallery with three images in three columns, and then add more images that will cascade to a new row and column.

Example –

```
.grid-container {  
  display: grid;  
  grid-auto-columns: 50px;  
}
```
